                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to TANGO or INTERCEPT proteins and coding sequences (see AAF45121-F45136 and AAF45138-F45139 and AAB66031-B66057, AAB66004-E66083 and AAB66085). The TANGO/INTERCEPT proteins and coding sequences are useful for the treatment of neurological disorders such as central nervous system (CNS) disorders, CNS-related disorders, focal brain disorders, global-diffuse cerebral disorders and other neurological and cerebrovascular disorders. The CNS disorders include Alzheimer's disease, senile dementia, Huntington's disease, amyotrophic

The present invention relates to TANGO or INTERCEPT proteins and coding sequences (see AAF45121-F44136 and AAF45139-F45139 and AAB66031-B66057, AAB66048-B66083 and AAB66085). The TANGO/INTERCEPT proteins and coding sequences are useful for the treatment of neurological disorders such as central nervous system (CNS) disorders, CNS-related disorders, focal neurological and cerebrovascular disorders and other neurological and cerebrovascular disorders and other lateral and cerebrovascular disorders. The CNS disorders include Alzheimer's disease, senile dementia, Huntington's disease, amyotrophic autonomic function disorders such as hypertension and sleep disorders, neuropsychiatric disorders such as hypertension and sleep disorders, anxiety, and bipolar affective disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         275
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                325

                                                                                                                                                                                                                                                                                                                                                                                                                        193
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            mRNA was isolated from rabbit gastric mucosal cells, converted to CDNA and fragments cloned in pUC18. Recombinant plasmids were used to transform E.coll MA294 and cells screened for reactivity with probes corresp. to known parts of the RGL sequence. One positive clone contd. plasmid pJ0101 which contd. a 1.35 kb pstI sequence. This fragment was isolated, subjected to PCR and the amplification prod. ligated with the 2.2 kb BgIII-SacI fragment of pR0276 (contg. a synthetic Tac promoter and transcription stop signal). The recombinant plasmid was designated PRGLN2.1.
                                                                                                                                                                                                                                                                                                                                                                                                                  Rabbit gastric lipase, its precursor and their DNA - useful for treating conditions linked to gastric lipase deficiency, such as mucoviscidiosis and pancreatic exocrine insufficiency
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 109

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cGL is used to improve absorption of ingested fat, in healthy and sick patients (e.g. having altered levels of gastric lipase); to treat conditions associated with insufficiency (or lack) of lipases, esp. mucoviscidosis or exocrine pancreatic insufficiency and partic. Where immobilised, for bloconversions, e.g. hydrolysis or transesterification (other mammalian gastric lipases, or derivs, can be used in this application).

plants producing recombinant lipase in an enzymatically active form.

Alternatively the first 12 bases of this sequence (encoding amino acids 1-4 of the protein encoded by this sequence) or bases 1-162 of this sequence (encoding amino acids 1-54) can be deleted to form the derivatives designated delta-4 or delta-54 respectively. Plants, or their extracts, expressing the lipases or the truncated derivatives, can be used: (a) as pharmaceuticals or food to facilitate absorption of fat, either in healthy subjects or in patients with inadequate levels of astric/pancreatic insufficient, in the elderly or in patients undergoing medical treatment which alters fat adsorption; (b) for performing industrial or gricultural reactions, e.g. in processing of fats or in the dairy industry, for hydrolysis or transesterification reactions, etc., where the plant naterial may provide both enzyme and substrate. The transgenic plants can also be used for biofuel production.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 210 AGCCACAAACTGGATCTCCAACCTGCCCAACAACAGCCTGGCCTTCATCC 259

The inventors claim a DNA sequence encoding AAP60723 linked to a promoter upstream and a gene for a polypeptide downstream. Particular examples are the yeast emzyme AMG, the mammalian enzyme, gastric lipase and the mammalian lymphokine, interferon-alpha2.

```
The inventors claim a pregastric lipase protein and a gene encoding it. Gastric lipase protein is useful for oral administration to treat lipase deficiency, e.g. cystic fibrosis or pancreatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New gastric lipase protein, esp. of human origin - for treating lipase deficiency, and DNA sequences coding for it

```
This is the nucleotide sequence encoding the human pre-duodenal (1.e. plants) il pass enzyme. The sequence can be used to generate transgenic plants producing recombinant lipase in an enzymatically active form. Alternatively bases encoding amino acids 20-23 or 20-73 (1-4 or 1-54 of the mature protein, respectively) can be deleted to form the derivatives designated delta-4 or delta-54 respectively. Plants, or their extracts, expressing the lipases or the truncated derivatives, can be used:
                                                                                                                                                                                                                                                                                                                                                                         Duodenal; gastric; lipase; transgenic; plant; recombinant; extract; ss; food; absorption; fat; pancreatic; cystic fibrosis; exocrine; dairy; hydrolysis; trans-esterification; substrate; enzyme; blofuel; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Recombinant human or canine pre-duodenal lipase prodn. in transgenic plants - useful for facilitating absorption of fat, as bio-catalysts and for prodn. of bio-fuel

                                                                                                                                                                                                                                                          171
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to human proteins (AAB6160B-AAB61617) and their coding sequences (AAF28679-AAF2869B). The proteins of the present invention have hydrophobic domains and can be used for the treatment of various immune deficiencies and disorders, such as severe combined immunodeficiency (SCID), multiple sclerosis, rheumatoid arthritis, autoimmune pulmonary inflammation, graft-versus-host disease and cullian-Barre syndrome. The proteins may also be useful in the treatment of allergic reactions and conditions, such as asthma and in regulation of haematopolesis or lymphoid cell deficiencies. The proteins may also have tissue growth or regeneration as well as wound healing and in the treatment of burns. The proteins may be used in the treatment of periodorial disease and in other tooth repair processes. Other uses include treatment of thrombolytic and haemostatic conditions, treatment of corprevention of tumours and inhibiting infection by bacteria, viruses,
                                                                                                                                                                                              New human proteins with hydrophobic domains, useful for the treatment of immune disorders, tumors, allergic conditions, thrombosis and microbial infection -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SerAsnTrp1leSerAsnLeuProAsnAsnSerLeuGlyPheIleLeuAl 121

```
The present invention relates to human proteins (AAB61608-AAB61617) and their coding sequences (AAF28679-AAF28698). The proteins of the present invention have hydrophobic domains and can be used for the treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New human proteins with hydrophobic domains, useful for the treatment of immune disorders, tumors, allergic conditions, thrombosis and microbial infection -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; hydrophobic domain; immune deficiency; autoimmune disorder;

immunodeficiency (SCID), multiple sclenois, theumatoid arthitis, autoimmune pulmonary inflammation, graft versus-host disease and guillain-barre syndrome. The proteins may also be useful in the treatment of allergic reactions and conditions, such as asthma and in regulation of haematopolesis or lymphoid cell deficiencies. The proteins may also have utility in compositions used for bone, cartilage, tendon and/or nerve tissue growth or regeneration as well as wound healing and in the periodontal disease and in other tooth repair processes. Other uses include treatment of thrombolytic and haemostatic conditions, treatment of prevention of tumours and inhibiting infection by bacteria, viruses,
    such as severe combined
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          307 GCTTTCCTTCTGGCAGATAGTGGTTATGACGTGTGGGTTGGGGAACAGCCG 356

The SESTS can be used for gene therapy and in vaccines. The SESTS are useful as probes for the identification and isolation of full-length cDNAs and genomic DNA molecules which correspond to the SESTS. Proteins encoded by the SESTs are useful in assays for determining biological activity and raising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAA43426 to AAA45925 represent specifically claimed secreted expressed sequence tags (SESTs), isolated from human, mouse, chicken and rat tissue sources. The SESTs can have a range of activities depending on the tissues they were isolated from. The activities include: chemotactic; proliferative; immunomodulatory; haematopoletic; chemotinetic; analgesic; haemostatic; thrombolytic; antihalammatory; ovytostatic; antibacterial; antifungal; antiviral; antidiabetic; antibacterial; antilucer; osteopathic; neuroprotective; nootropic; antiparkinsonian; antipsoriatic; cerebroprotective;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             expressed sequence tags (sESTs), useful for treating various disorders such as autoimmune, infectious, and central nervous system disorders

```
This is the nucleotide sequence of a contig assembled from the entire cDNA insert in clone ssl.pk0022.al and a portion of the cDNA insert in clone ssl.pk0022.al and a portion of the cDNA insert in clone sdp3c.pk004.n3 encoding the entire soybean cold triacylglycerol lipase (TAGL) (see AAV32309). The clones were isolated from soybean developing pod and seedling (5-10 day post germination) CDNA libraries. Novel acid and neutral TAGL polypeptides (5-10 day post centalpa, rice, soybean and wheat tissues are disclosed. The enzymes may be prepared recombinantly and used to raise antibodies, which may be prepared recombinantly and used to raise antibodies, which cell extracts. The polynucleotides may be used to create transgenic plants in which the TAGL levels are present at higher or lover levels than normal, or in cell types or developmental processes where they are not normally found. This would alter the level of triacylglycerol and choisereryl esters found in those cells. Accumulation of fatty acids with unusual structures may be desirable to eliminate expression of TAGL genes for certain applications. TAGL enzymes may also be used as targets to facilitate the processing of plant seed oils and for the development of novel seed oils. The TAGL enzymes can also be used as targets to facilitate the useful as herbicides. This is desirable because inhibition of the activity of elther of the enzymes could lead to an inhibition of plant primers, which are useful for genetic mapping, as markers for traits in the plymicleotides also serve as a source of probes and primers, which are useful for genetic mapping, as markers for traits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel plant triacylglycerol lipase polynucleotides used to alter the level of the enzyme in transgenic plants

This is the nucleotide sequence of the CDNA insert in clone

Ilpase (TAGL) (see AAY23207). The clone was isolated from a rice

Ilpase (TAGL) (see AAY23207). The clone was isolated from a rice

leaf CDNA library. Novel acid and neutral TAGL polypeptides

(see AAY32301-17) and polynucleotides (see AAZ34950-66) from corn,

Catalpa, rice, soybean and wheat tissues are disclosed. The enzymes

may be prepared recombinantly and used to raise antibodies, which

are used for detecting the enzymes in situ in cells or in vitro in

cell axtracts. The polynucleotides may be used to create transgenic

plants in which the TAGL levels are present at higher or lower levels

than normal, or in cell types or developmental processes where they are

not normally found. This would alter the level of triacylajycerol and

cholesteryl esters found in those cells. Accumulation of fatty acids

with unusual structures may be desirable to eliminate expression of TAGL

foods. In addition, it may be desirable to eliminate expression of TAGL

genes for certain applications. TAGL enzymes may also be used to receive the

colls. The TAGL enzymes can also be used as targets to facilitate the

special as herbicides. This is desirable because inhibition of the

activity of either of the enzymes could lead to an inhibition of plant

proven. The polynucleotides also serve as a source of probes and

primers, which are useful for genetic mapping, as markers for traits

class and to isolate homologous sequences from other level of the enzyme in transgenic plants Claim 2; Page 44; 65pp; English spectes.
